The FEAL project aims at developing open educational e-learning tools which explain how the knowledge on landscape values can be implemented into farming practices of small, family and young farmers. FEAL provides case studies about multifunctional and sustainable farming activities practised in different European landscape types edited as e-learning materials. Thus, inspirational ideas could become a part of trade marks of regional and traditional products, and they can be beneficial for creating an attractive landscape image for tourism activities.

The impact of stronger globalization and the need for the establishment closer links between farmers and decisions established at offices or in remote Brussels. They further address the conflict between climate change, as well as their economic activities are subordinated to administrative and legal rules and decisions established at offices or in remote Brussels. They further address the conflict between the impact of stronger globalization and the need for the establishment closer links between farmers and their territories.

European agricultural landscapes (EALs) play a decisive role in protecting biodiversity and agricultural land production, and last but not least they are bearers of cultural and historical values. Farmers face different challenges. Their primary agricultural activity is influenced by climate change, as well as their economic activities are subordinated to administrative and legal rules and decisions established at offices or in remote Brussels. They further address the conflict between the impact of stronger globalization and the need for the establishment closer links between farmers and their territories.

Project Erasmus KA2 + nr. 2016-1-SK01-K202-022502
01/12/2016 - 31/05/2019

Case studies are examples of good practices on multifunctional and sustainable agriculture of small and young farmers in different landscape types and socio-economic situations. 5-7 Case Studies from Germany, Italy, Slovenia, Slovakia and Spain, available in 7 languages provide farm data, the movement of the owners how and why they have chosen their farming concept and the most important lessons to learn.

Case Studies

The FEAL project will offer a training system based on case studies, a collection of which are presented here and will soon be available on the platform with more details.

SLOVAKIA

The Markočová family has mastered business strategy without any kind of support. The farmers were involved in youth education in cooperation with Výdra Čempy Below NGO, Maslovce Dear Civic Association (established in 2015) focuses on training and educational activities directly on the farm.

“We love to make our guests to feel like at home here and we like to share the spirit of this landscape with them. We care for and maintain the surrounding landscape as real "landscape gardener".” – Viera Markočová and Pavol Marko č

Follow us!

Complementary Open Educational Resources (OER) include training modules, electronic atlas of European agricultural landscapes coupled with case studies - examples of good practices provided by small and multifunctional family farms which contribute to sustainable rural development.

The educational system in digital form includes the project outputs that are compatible with OER repositories, the FEAL-EDUWEB e-learning platform and Moodle. It will be freely available for our target group but also the general public.
