

SEMA's aim & mission

*How can European agriculture be reshaped towards greater sustainability? How can European agriculture be more competitive? How can the multifunctional approach of European agriculture be supported? Aim of the SEMA project is to provide training and capacity building opportunities according to the needs for qualification of European farmers beyond formal vocational training and additional case studies. Its mission is to promote and support rural entrepreneurship and improve viability of farming in multifunctional agriculture.*

Dear followers and project partners of HuL,

Proudly we can tell you that SEMA project was awarded by a designated jury within annual IALB/ EUFRAS-conference in June 2017 taking place in Münster. Especially highlighted was the chance of a Learning „from farmer to farmer“ within the approach of enabling mentoring.

The conference was the meeting point for 360 participants from 12 countries in the field of agricultural advisory.

Thematic focus of the conference were new ways - chances and challenges for farming - within global and regional markets.

Please find pictures of the presentation and the receiving of the award attached.

We feel honored and we are very happy about the award.

This is further fostering our initiative to disseminate the project.

Please feel free to spread SEMA-project and its tools and possibilities within your network.

<http://www.sema-project.eu>

In practice for us the exchange from farmer to farmer is very supportive for effective implementations of concepts in our daily work in advisory.
